INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 1937/PCT	FOR FURTHER ACTION See Notification of Transmittal of Internation Preliminary Examination Report (Form PCT/IPEA/4				
International application No. PCT/CH2003/000240	International filing date (day/month/year) Priority date (day/month/year) 11 April 2003 (11.04.2003)				
International Patent Classification (IPC) or A61F 2/44	national classification and IPC				
Applicant	MATHYS MEDIZINALTECHNIK AG				
This international preliminary exam and is transmitted to the applicant act	ination report has been prepared by this International Preliminary Examining Authority coording to Article 36.				
2. This REPORT consists of a total of	6 sheets, including this cover sheet.				
This report is also accompaniamended and are the basis for 70.16 and Section 607 of the A	ed by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been this report and/or sheets containing rectifications made before this Authority (see Rule Administrative Instructions under the PCT).				
These annexes consist of a tot.	al of3 sheets.				
This report contains indications relating to the following items: Basis of the report					
III Non-establishment of	opinion with regard to novelty, inventive step and industrial applicability				
IV Lack of unity of inven	tion				
V Reasoned statement up	nder Article 35(2) with regard to novelty, inventive step or industrial applicability;				
VI Certain documents cite					
VII Certain defects in the international application

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: III.1

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claim 15 of the present application defines a method for fixing an implant inside an intervertebral space. This method represents a method for the treatment of the human body by surgery within the meaning of PCT Rule 67.1(iv). Consequently, no examination was carried out for these claims (PCT Article 34(4)(a)(i)).

International application No. PCT/CH 03/00240

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following document:

D1: US-A1-2002/138142 (NICHOLS DAVID ET AL) 26 September 2002 (2002-09-26).

Document D1 is considered to be the closest prior art for the subject matter of claim 1. D1 discloses (the references in parentheses are to D1):

an intervertebral implant comprising two anchoring means (end caps, paragraph 44) for fixing said intervertebral implant to the end plates of a vertebra.

Each anchoring means comprises (see D1, paragraph 35 and figure 6)

- an anchoring part (640) which comprises a central axis (A) and two end faces extending transversely to the central axis (A),
- a plurality of spikes (652) projecting from one end face,
- a through cavity (646) extending parallel to the central axis, and

PCT/CH 03/00240

fixing means (644a, 644b) by means of which the anchoring part can be detachably locked to the intervertebral implant.

The subject matter of claim 1 differs therefore from the known intervertebral implant in that

the intervertebral implant comprises at each end a terminal plate which intersects the central axis, and in that the terminal plates can be guided through the cavity of the respective anchoring parts.

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

The problem addressed by the present invention can therefore be considered that of obtaining an intervertebral implant in which the anchoring means can be pressed in a simple manner into the end plates of the vertebra only after the implant has been introduced into the intervertebral space.

The subject matter of claim 1 solves this problem in that the anchoring means can be pushed upwards and downwards against the end plates of the vertebra from the centre of the (e.g., cylindrical) implant after implantation. anchoring means are directly accessible from the outside.

This solution is neither disclosed nor suggested by the documents cited in the international search report, and therefore claim 1 complies with the requirements of PCT Article 33(2).

Claims 2-14 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and inventive step.

International application No. PCT/CH 03/00240

Observations:

The two-part form of claim 1 does not take proper account of the prior art (D1) in accordance with PCT Rule 6.3(b).

The description does not cite document D1 or indicate the relevant prior art disclosed therein (PCT Rule 5.1(a)(ii)).
